

Cash Management:

Offers commercial banking customers unprecedented flexibility. This service allows you to access your accounts and transactions, originate routine banking transactions, wire transfers, and ACH transactions, make payments and retrieve statements.

Secure Token:

For added security, tokens provide an additional layer of authentication for your authorized employees. During login, users are prompted to enter a six digit code from their token device. If the user enters the wrong credential code or doesn't have their token, access to online banking is denied and your funds remain secure.

Remote Deposit Capture:

Save time and money with remote deposit capture. Deposits can be submitted electronically throughout the day, at your convenience, from a simple desktop scanner. A confirmation email is sent with each deposit to verify the deposit has been received. Easy to use software and equipment requires little training.

Online Banking and Bill Payment:

Our enhanced Cash Management and Mobile Banking allow you to bank anywhere, anytime! Administered with layered security for your office computer, laptop or mobile device.
